Adrian Chmiel

Independent Digital Product Builder

Web applications · Business software · AI-assisted development

Location: United Kingdom Email: contact@adrianchmiel.co.uk Portfolio: adrianchmiel.co.uk

Professional profile

Independent digital product builder with practical experience developing web applications, business tools and online platforms using AI-assisted development workflows.

Over approximately the past year, I have worked on four digital products covering bakery management, invoicing, community information and online appointment booking.

I work with Laravel, PHP, MySQL, React and JavaScript, using Claude Code, ChatGPT and OpenAI Codex to support planning, implementation and iterative development.

Alongside my technology projects, I bring approximately 11 years of experience working in the bakery industry, which gives me a practical perspective on everyday business operations.

I am interested in opportunities where I can contribute to digital products, develop my technical skills and continue building practical software.

Selected digital projects

Four independent products, each live and open to visit.

01 OvenDesk

Bakery management software

www.ovendesk.co.uk

An independent bakery management software project covering orders, production, deliveries and daily operational workflows. The product includes a management dashboard, a counter point-of-sale interface and a dedicated driver application. It reflects my interest in building practical tools around business operations.

02 Invly

Invoicing SaaS platform

www.invly.co.uk

An invoicing platform for UK freelancers and small businesses. The application brings invoice creation, client management, payment tracking, quotations, expenses and recurring invoicing into one digital product. It demonstrates experience of connected business workflows rather than a standalone marketing website.

03 CheshamHub

Community web platform

www.cheshamhub.co.uk

An independent digital platform for the town of Chesham in Buckinghamshire. The website brings together local business information, events, marketplace listings and community resources, alongside live transport information. It demonstrates a multi-feature platform combining different information sources and user needs.

04 Blow Me Away

Hairdressing website and custom booking system

www.blowmeaway.co.uk

A customer-facing website for an independent hairdressing business. The project combines service information, pricing and visual presentation with a custom online appointment booking journey. It also provides functionality for managing existing bookings.

Technical environment

Web development `Laravel · PHP · MySQL · React · JavaScript`

Technologies used in developing my independent projects with AI assistance.

AI-assisted development `Claude Code · ChatGPT · OpenAI Codex`

I use AI-assisted development tools to explore ideas, plan functionality, implement features and refine working applications. My focus is on understanding the problem, shaping what the product needs to do and improving the user experience.

Infrastructure and Linux `Ubuntu Server · Personal home server`

I built and configured my own home server running Ubuntu Server, which I continue to maintain and administer. It is part of my practical interest in Linux, server environments and running technology.

Professional experience

Darvells Bakery

Approximately 11 years — **Present**

Van Driver · Chesham, United Kingdom

Working in an established bakery business has given me experience of a time-sensitive operational environment and first-hand exposure to the practical routines of bakery deliveries.

This background informs my interest in building software around everyday business processes.

Zizzi Restaurant

Approximately one year — **Previous role**

Bartender

Worked in a restaurant environment as a bartender before joining Darvells Bakery.

Independent digital development

Independent projects

Approximately one year — **Ongoing**

AI-assisted development

During this period, I have worked on four digital products across several different use cases, including bakery operations, business invoicing, local community services and appointment booking.

I use modern AI development tools alongside web technologies to help turn ideas into functional applications.

This is independent project work, not formal software engineering employment.

Education

Technikum Hotelarsko-Turystyczne

Łódź, Poland

Hospitality and tourism — technical secondary education

Completed technical secondary education specialising in hospitality and tourism.
